Art Unit: 1771

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 1 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The specification does not adequately describe how to make a woven fabric wherein the at least a part of the warp or weft yarns consist of straight yarns. Since the warp and weft are interwoven in a woven fabric it is not clear how the warp and weft yarns could be straight yarns.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 2-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Townley et al, U.S. Patent No. 5,657,797. Townley discloses a paper making felt comprising a base fabric having a fibrous batt needled on to it. The base fabric may comprise a woven fabric. The fabric may further comprise stuffer yarns which stabilize the woven fabric. The stuffer yarns correspond to the claimed straight yarns. The stuffer yarns are evenly distributed.

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1771

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 2-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Townley et al, U.S. Patent No. 5,657,797. Townley discloses a paper making felt as set forth above. Townley et al differs from the claimed invention because Townley does not disclose that the straight yarns comprise at least 40% of the number of yarns in the warp and weft of the woven fabric.

However, Townley does teach that the stuffer yarns serve to stabilize the fabric. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have optimized the number of stuffer yarns through the process of routine experimentation in order to produce a felt having the desired stability.

7. Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth M. Cole whose telephone number is (703) 308-0037. The examiner may be reached between 6:30 AM and 5:00 PM Monday through Thursday.
